

## **Systems Thinking for Sustainability and Beyond**

Today's complex sustainability challenges are growing in scale in an accelerated way. Environmental and social crises need to be addressed strategically as well as systematically. In this seminar, an introduction to systems thinking will be made and the practical areas of systems thinking for reaching sustainable society will be mentioned. Also, as today's complex challenges cannot be addressed only through a sustainability lens, some insights will be shared in order for shifting towards regeneration. The seminar will also include some good and bad real-life examples from the private sector.
